

ROMAN MAZURYK

Technical Product Manager — MedTech Systems & Clinical Integration

Hamburg, Germany · Remote (EU / Global) | romazuryk@proton.me | [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Technical Product Manager with 10+ years delivering complex MedTech systems across regulated clinical environments. End-to-end lifecycle ownership from discovery to commissioning, integrating hardware, software, and clinical workflows. International multi-vendor coordination (EU/US/Asia OEMs) and former CEO operator background (\$50M+ P&L). Recently expanded into AI-augmented software delivery and digital platforms for healthcare and logistics.

CORE COMPETENCIES

- **System Integration** — Hardware + Software + Clinical Workflow
- **Product Lifecycle Ownership** — Discovery, Architecture, Delivery, Commissioning, Support
- **Regulated Environments** — GDP-compliant delivery; MDR / ISO exposure
- **Multi-Vendor / OEM Coordination** — International medical device manufacturers (EU, US, Asia)
- **Cross-Functional Leadership** — Engineering, clinical staff, suppliers, operations, executive stakeholders
- **Risk & Trade-off Management** — Regulatory, technical, and operational constraints in high-complexity environments
- **AI-Augmented SDLC** — Codex, ClaudeCode, v0 for prototyping and production-grade delivery (Render / Vercel)
- **Methodologies** — Agile, Waterfall, hybrid delivery models

PROFESSIONAL EXPERIENCE

Technical Product Manager / Project Lead — PharmaLogis GmbH

Hamburg, Germany · 08/2024 – 11/2025

Internal logistics & warehouse platform — GDP-compliant pharmaceutical environment

- Owned full lifecycle of system development: discovery, architecture, implementation, deployment, and operational support.
- Architected role-based platform covering order lifecycle, warehouse stock, delivery tracking, and cold-chain processes; defined RBAC model, order state machine, audit logic, and data flows.
- Reduced manual coordination overhead by 32% and improved shipment traceability across multi-site operations.
- Coordinated cross-functional stakeholders (operations, logistics, management) and aligned system capabilities with regulatory and business requirements.
- Established structured documentation, change-tracking, and release processes; deployed via Render with iterative release cycles.

Founder & Technical Project Lead — Medintegro

Kyiv, Ukraine · 12/2012 – 05/2024

Medical systems integration — 20+ systems delivered across public and private healthcare institutions

- Managed end-to-end project lifecycle for 20+ integrated medical systems: needs analysis, solution design, supplier coordination, delivery, installation, commissioning, and post-deployment support.
- Coordinated international medical device manufacturers (EU, US, Asia), local contractors, and clinical stakeholders across multi-vendor system integrations.
- Delivered integrated operating room systems combining multi-source video (endoscope, microscope, PTZ, imaging), surgical workflows, and clinical staff training.
- Designed modular operational frameworks increasing process repeatability and reducing post-delivery friction by ~25%.
- Selected achievements: delivered Ukraine's first integrated OR system (Surgimedia); introduced multiple innovative MedTech products to the Ukrainian market; maintained long-term partnerships with leading global manufacturers.

CEO / Head of International Business Development — Acropolis Biosciences

Kyiv, Ukraine · 06/2011 – 08/2012

Regulated healthcare distribution — \$50M+ turnover, 70+ FTE

- Directed digital transformation and data-flow integration across an international supply chain in a regulated healthcare market.
- Led operational turnaround under regulatory constraints; managed P&L, partnerships, and cross-functional teams.

SELECTED PROJECTS

LiveSurgery — OR Streaming & Collaboration Platform (PoC)

Role: Technical Product Manager / System Designer

- Designed PoC for multi-source OR video streaming and real-time surgical collaboration; defined workflows from real clinical constraints (endoscope, microscope, PTZ, imaging).
- Defined system architecture for session management, video layout control, and device control.
- Built UI/UX architecture leveraging Codex, ClaudeCode, and v0 for rapid prototyping; deployed via Render/Vercel.
- Validated concept with domain experts (surgeons, clinical staff, hospital administrators).

FlowLogix — Pharma Logistics & Operations Platform

Role: Technical Product Manager & System Architect

- Owned discovery → delivery of operations platform: RBAC, warehouse and delivery tracking, analytics timeline.
- Defined system architecture, data models, API structure, and access control.
- Improved stock visibility and coordination efficiency by ~30%; shipped, documented, and deployed to production.

MedTech Implementation Handoff Assistant

Reference Workflow / AI-Assisted Product Concept

- Mapped fragmented implementation workflows across email, spreadsheets, PDFs, CRM notes, and meetings.
- Defined AI-assisted support for requirement structuring, missing-document tracking, meeting summaries, risk flags, and customer status updates.
- Created product logic for workflow states, roles, review checkpoints, auditability, and handover artifacts.
- Used AI and automation tools to accelerate discovery, workflow modeling, product specification, documentation, prototype planning, and automation flow design.

AI / Product Stack: ChatGPT, Claude, Perplexity, v0, Figma / FigJam, n8n, GitHub, Markdown, Mermaid.

Methods: workflow mapping, product discovery, AI opportunity mapping, requirements structuring, SOP / handover logic, automation flow design.

EDUCATION

- MSc, Software Development — GoIT Neoversity (in progress, expected Dec 2026)
- Project Management Certificate — GoIT
- BA, Linguistics — Kyiv Polytechnic Institute

LANGUAGES

- English — C1 · German — B1 · Ukrainian, Russian — Native / Bilingual
